PATENT PENDING

BITEBUSTER® SAFETY WEAR advocates following your establishment's handling procedures when working with potentially harmful animals..... however.... we do have some general tips for you to keep in mind.....

HELPFUL TIPS FOR SAFE AND HUMANE ANIMAL HANDLING

ATTITUDE IS EVERYTHING!-how many times have we heard that? A relaxed attitude is the best to have in order to help the animals relax. If you are fearful, the fear is transferred to the animal.

LESS RESTRAINT IS BETTER!-having one person holding can be helpful, having a group of people is fearful. Extreme restraint causes more fear, and makes the pet owners uneasy.

MORE FEAR CAUSES MORE BITES AND SCRATCHES!-every action has an equal and opposite reaction! Wait! How did we get into Science class? It's simple, the science of animal handling is pretty basic. Animals who are fearful will trigger a **FEAR REACTION!** Do any of these expressions look familiar?

AGGRESSION

EXCITEMENT

STRESS

AGITATION

Finally, to help eliminate the **FEAR FACTOR** in working with animals first use **BITEBUSTER® SAFETY WEAR** to protect yourself. Then, try to eliminate as much noise as possible and talk to the animal in a nice, calm, smooth voice. Try avoid using "baby talk" unless the animal is used to that.
